

XXIII International Conference on Photonic, Electronic and Atomic Collisions

July 23-29, 2003

Stockholm University – Aula Magna
Stockholm, Sweden

Invitation to vendor's exhibition and related activities.

The International Conference on Photonic, Electronic and Atomic Collisions (ICPEAC) has been organized every second year since the start 1958 in New York. Between 600 and 900 physicists from around the world usually participate in these conferences, the higher numbers when the conference is in Europe. The 23rd conference in the series will take place in Stockholm on July 23-29, 2003, organised by physicists from Stockholm University, the Royal Institute of Technology and Uppsala University. Further details about the conference can be found in the 2nd Announcement and elsewhere on the home page, www.physto.se/icpeac.

Many of the participants work in experimental physics and they will be interested in the latest development in experimental systems and components. The organising committee therefore wants to invite companies producing and/or selling relevant products or services to participate in a vendor's exhibition or to inform about their products in the printed material, with leaflets in the conference bags or on the home page. The exhibition will take place in the lobby of the main lecture hall of the conference, Aula Magna during July 22 – 25. Coffee will be served in this area during breaks. For prices and other information, see Invitation to exhibit and Registration form and Sketch of vendor area.

Relevant products or services include e.g. vacuum systems, in particular UHV, cryogenics, particle and photon detectors, electronics for signal processing, data collection and evaluation. Furthermore, particle and photon beam production, transport and control are other examples of areas of interest, as well as precision mechanical movement and control systems and optics fabrication, just to mention a few. Other products like books and journals are of interest to all the participants.

The organising committee welcomes sponsor agreements on special issues like bags, pencils etc., or parts of the arrangements. It has been considered to include a session with vendor presentations. Please contact us for questions or proposals. For further information on the conference, please contact us or anyone in the local organising committee. For registration or technical issues, please contact the conference secretariat at Stockholm Convention Bureau.

We are looking forward to hearing from you
